

Junction Works at the A283/B2135 junction

WSCC Highways and Transport Department have informed are going to start carrying out this work on 1st September. The work will be in two stages namely:

1. Cutting back on vegetation and large trees which have encroached on to or are very close to the carriageway for a distance of 215 metres. The contractor has booked the road space for two weeks to be on the safe side but it should not take this amount of time to finish this element of works.
2. They will then follow up with replacing all the signs, bollards and road markings broadly in the same position that they are now but the date for this work I do not have at the moment but it should follow fairly quickly after clearing all the vegetation.

Advance warning signs will be erected in the local area to inform road users of the proposed works.
